

- A. The program processes an input csv with data for people and stores it in a dictionary. It then saves the dictionary in a pickle file and then loads that pickle file and displays the data that was stored.
- B. To run: "python [filename] [relative path to the data]" in the terminal.
- C. Text processing for Python, in my opinion, is simple due to the vast amount of library functions and easy to write nature of the syntax. It may not be the fastest, however, the convenience of the language's functions and accessibility make it a good choice.
- D. In this assignment, I reviewed Python parsing, OOP, and general syntax.
